MATH20902 - Discrete Mathematics

Year: 2 - Semester: 2 - Credit Rating: 10

Requisites

Prerequisites

MATH10101 or MATH10111, MATH10222 or MATH10232

Aims

This module aims to engage students with a circle of algorithmic techniques and concrete problems arising in elementary number theory and graph theory.

Brief Description

Modern Discrete Mathematics is a broad subject bearing on everything from logic to logistics. Roughly speaking, it is a part of mathematics that touches on those subjects that Calculus and Algebra can't: problems where there is no sensible notion continuity or smoothness and little algebraic structure. The subject, which is typically concerned with finite or at the most countable sets of objects, abounds with interesting, concrete problems and entertaining examples.

Learning Outcomes

Students should develop the ability to think and argue algorithmically, mainly by studying examples and applications in graph theory and combinatorics.

On completion of this unit successful students will be able to:

- understand proofs by induction thoroughly and be fluent in their construction;
- read and understand written descriptions of algorithms;
- develop and apply simple algorithms to solve problems or prove theorems;
- give the basic definitions of graph theory and a range of standard examples including, for example, complete graphs and bipartite graphs;
- characterise planar graphs and prove the five-colour theorem.

Syllabus

Graph Theory & Applications: [22]

The basic definitions about graphs should be familiar from the Mathematical Workshop MATH10001, so after a brief review we will treat the following topics:

- Basic notions & notations, trees [4]
- Eulerian tours & Hamiltonian cycles [4]
- Applications to Social Networks [1]
- The Principle of Inclusion/Exclusion and the Matrix-Tree Theorem [3]
- Shortest paths & applications to scheduling [5]
- Planar graphs & graph colouring [5]

Teaching & Learning Process (Hours Allocated To)

Lectures	Tutorials/ Example Classes	Practical Work/ Laboratory	Private Study	Total
30	6	0	64	100

Assessment and Feedback

- Coursework; Weighting within unit 20%. This will consist of a problem set handed out in Week 6 and due at the end of Week 8.
- 2 hours end of semester examination; Weighting within unit 80%

Further Reading

- Dieter Jungnickel, Graphs, Networks and Algorithms (Springer, 2005)

This book is available online through SpringerLink, a service to which the University subscribes.

Staff Involved

Dr Mark Muldoon - Lecturer
