

Course ID 020802

Discrete Mathematics

Unit coordinator: Mark Muldoon

MATH 20902
Credit rating 10
ECTS credits 5

Semester 2

School of Mathematics
Undergraduate

Level 2

FHEQ level ' Middle part of Bachelors'

Marketing course unit overview

Modern Discrete Mathematics is a broad subject bearing on everything from logic to logistics. Roughly speaking, it is a part of mathematics that touches on those subjects that Calculus and Algebra can't: problems where there is no sensible notion continuity or smoothness and little algebraic structure. The subject, which is typically concerned with finite or at the most countable sets of objects, abounds with interesting, concrete problems and entertaining examples.

Course unit overview

Modern Discrete Mathematics is a broad subject bearing on everything from logic to logistics. Roughly speaking, it is a part of mathematics that touches on those subjects that Calculus and Algebra can't: problems where there is no sensible notion continuity or smoothness and little algebraic structure. The subject, which is typically concerned with finite or at the most countable sets of objects, abounds with interesting, concrete problems and entertaining examples.

Aims

This module aims to engage students with a circle of algorithmic techniques and concrete problems arising in elementary number theory and graph theory.

Learning outcomes

Students should develop the ability to think and argue algorithmically, mainly by studying examples and applications in graph theory and combinatorics.

On completion of this unit successful students will be able to:

- understand proofs by induction thoroughly and be fluent in their construction;
- read and understand written descriptions of algorithms;
- develop and apply simple algorithms to solve problems or prove theorems;
- give the basic definitions of graph theory and a range of standard examples including, for example, complete graphs and bipartite graphs;
- characterise planar graphs and prove the five-colour theorem.

Syllabus

Graph Theory & Applications: [22]

The basic definitions about graphs should be familiar from the Mathematical Workshop MATH10001, so after a brief review we will treat the following topics:

- Basic notions & notations, trees [5]
- Eulerian tours & Hamiltonian cycles [4]
- The Principle of Inclusion/Exclusion and the Matrix-Tree Theorem [4]
- Shortest paths & applications to scheduling [4]

Planar graphs & map colouring [5]

Assessment methods

Other	20%
Written exam	80%

Coursework; Weighting within unit 20%. This will consist of a problem set due on the last Friday before Easter and handed out two weeks earlier.

2 hours end of semester examination; Weighting within unit 80%

Feedback methods

Tutorials will provide an opportunity for students' work to be discussed and to provide feedback on their understanding.

Requisites

NONE
